Dmitry Kuznetsov

Python Developer

Employment History

Full Stack Python Developer at Netology

December 2021 — Present

Educational program.

I remembered Python, SQL, Git and REST API. On my own, I studied OOP principles, Docker and Django.

I am currently working on my pet-project — service which aggregates data from my favourite news sources using NLP (news and articles in «one window mode»).

Completed projects:

- Working with API and file backup (link)

Data Science & Machine Learning at Netology

February 2020 — January 2021

Educational program.

I studied making machine learning models and their upgrading, recommender systems, time series, computer vision, neural networks and natural learning procession.

The final project was the recognition of the mask on the face in real-time (hello, COVID).

Completed projects:

- Real-Time Face Mask Detection (link)
- Sales forecast and identification of factors affecting sales using machine learning (link)

Head of CRM and Customer Data at Amediateka, Moscow, Russia

April 2019 — Present

- the management of customers data from several sources
- dynamic HTML & CSS layout
- RFM segmentation using Python
- A/B testings with a control group and campaign analysis

Education

Bachelor's degree, Moscow Aviation Institute (National Research University), Moscow, Russia

September 2009 — July 2015

Courses

Full Stack Django, Udemy

September 2021 — November 2021
